## SUSTAINABILITY MANAGEMENT IN TEXTILES

Unique in the German-speaking world so far, this internationally recognized continuing education program in the field of textile sustainability management is now proposed also in English as well. Graduates learn methods, models and ways of thinking for new sustainable business practices in the textile and clothing industry.

## PERSPECTIVES

A sustainable business practice is a decisive advantage in international competition. Graduates can use the acquired know-how to plan their sustainability strategies. Thanks to their specialised knowledge, they are able to hold expert discussions with leaders from marketing, production and research & development.

- Strategic realignment of processes, business models and products around sustainability
- Sustainable product engineering in the fields of design, development and construction
- Leading innovation teams and managing complex projects
- R&D activities in the field of sustainability
- Design and implementation of sustainability projects
- Sustainable communication management

## CONTENTS

The continuing education program includes the following focal points:

- Global challenges and sustainability as a multilateral solution
- Normative and strategic management of sustainability for the textile sector
- Social responsibility, human rights, initiatives and standards
- Sustainable raw materials and products: Fibers and Fabrics, Chemicals for Textiles and Leather, Biodiversity & Animal Welfare
- Marketing and labeling of sustainable textiles
- Future scenarios and best practices
